Sequence 4284, Application US/09328352

Sequence 4284, Application US/09328352

Patent No. 6562958

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252

SEQ ID NO 4284

Sequence 1, Application US/09310187A;
Patent No. 6358751
GENERAL INFORMATION:
APPLICANT: Benichou, Gilles
TITLE OF INVENTION: Involvement of Autoantigens in Cardiac
TITLE OF INVENTION: Involvement of Autoantigens in Cardiac
TITLE REFERENCE: UCSF-090
CURRENT APPLICATION NUMBER: US/09/310,187A;
CURRENT FILING DATE: 1999-05-12
NUMBER OF SEQ ID NOS: 3
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        6.7%; Score 101; DB 3; Length 1939;

A, Description: attacks blood cell membranes and causes cell lysis
C; Superfamily: hemolysin A; hemolysin A homology
C; Superfamily: hemolysin A; hemolysin A homology
C; Keywords: calcium binding; cytolysis; exotoxin; hemolysis; lipoprotein; tandem repeat;
F; 246-791/Domain: hemolysin A homology <HLYA>.
F; 228-851/Region: 9-residue repeats (G-G-X-G-[DN]-D-X-[LVIYF]-X)
F; 563, 689/Binding site: palmitate (Lys) (covalent) #status experimental
                                                                                                                                                                                                        required for the toxic activity
